WATS1020 Final Project - Concept Ideas

Basic Ideas/Design Plan

For my final project, I want to implement an series of photos I've taken of some of my favorite bands over the last few years. I'm a huge indie rock scene guy, so I think it'll be fun to try to create a page dedicated to a select few. I want to create a page with some responsive sections including a "view/hide" section where you can view details about the band. I also want to include a map where several Seattle venues will be highlighted. Especially venues that often host these bands. I only want to use a few bands as I don't want to make the page too complicated and packed. I think I want to include a carousel near the top of the page to cycle through some highlighted pictures. I also want to try to include a mini-form where users can sign up for a newsletter of some kind. I was also considering a vote section for which band is your favorite!

I'm still not sure if I want to go through Wordpress at the moment, but I will implement Bootstrap especially for things like tabs and the carousel. I want to try out some CSS animations and Javascript/JQuery. Including a Leaflet/map section.

Not sure how ambitious all of this will be, but I am excited to work on it!
